RESEARCH FOCUS

I am interested in the broad intersection of AI with security, safety, and sociopolitical aspects. This includes the following areas:

- 1) Understanding, probing, and evaluating the failure modes of AI models, their biases, emergent risks, and their misuse scenarios.
- 2) How to design mitigations, system defenses, white-box control methods, and reasoning enhancements to counter such risks.
- 3) Leveraging AI agents for good: scientific discovery and advancing our society.

Our previous work, in 2023, was the first to identify the indirect prompt injection vulnerability in LLM-integrated applications, and in 2020, to propose and call for watermarking generative AI.
